CDP Description

Commercial Display Panel (CDP) prints are an ideal solution for high quality durable prints to be used in commercial environments. They consist of:

- C-Print - a high-quality print, printed with a 10-color extended gamut solvent inkjet printer.

- Mounting on 3-mm E-Panel. (E-Panel is a rigid aluminum composite panel.)

- Laminated with a scratch resistant matte laminate that eliminates glare and protects the surface from marks and UV light.

- Corners have a 1/8" radius so that there are no sharp corners.

CDP+ Description

CDP+ prints are a step above CDP prints. They are printed on Epson Premium paper using a 12-color pigmented ink printer. This results in a more saturated and brighter image. The mounting, laminating, and corner radius is all done to the same specs as CDP prints.

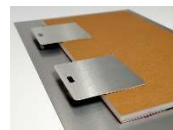

Great for brightening walls for business, medical, and government offices.

Finishing

- CDP prints can be displayed with or without frames.

- When used with frames, glass is not needed. This allows for reflection-free viewing, less cost, and easy shipping.

- When used without frames, they provide a very clean look allowing all the attention to be focused on the image.

- Lighting issues are not a problem since the matte surface is reflection free.

- Graphics can easily be cleaned with a soft cloth and glass cleaner.

Shadow Mount

This is the most popular method of display. A Gatorfoam block with aluminum hangers is attached to the back of the print allowing it to be hung on the wall with a nail or screw. Once hung it appears that the image is floating ½" from the wall.

Aluminum Frame back

An aluminum frame is attached to the back of the metal. This frame can be hung using wire or a Z-Bar hanger. Once hung it appears that the image is floating ¾" from the wall.

Cleats

PVC or MDF cleats are applied to the back. This floats the graphic ½" off the wall and keeps it stable so that it will not tilt.

Standoffs

The panel can be mounted to a wall using aluminum standoff posts. We offer a large variety of sizes and finishes.

- Mounting on 3-mm E-Panel. (E-Panel is a rigid aluminum composite panel.)

- Laminated with a scratch resistant matte laminate that eliminates glare and protects the surface from marks and UV light.

- Corners have a 1/8" radius so that there are no sharp corners.

CDP+ Description

CDP+ prints are a step above CDP prints. They are printed on Epson Premium paper using a 12-color pigmented ink printer. This results in a more saturated and brighter image. The mounting, laminating, and corner radius is all done to the same specs as CDP prints.

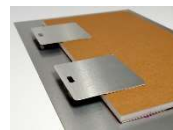

Great for brightening walls for business, medical, and government offices.

Finishing

- CDP prints can be displayed with or without frames.

- When used with frames, glass is not needed. This allows for reflection-free viewing, less cost, and easy shipping.

- When used without frames, they provide a very clean look allowing all the attention to be focused on the image.

- Lighting issues are not a problem since the matte surface is reflection free.

- Graphics can easily be cleaned with a soft cloth and glass cleaner.

Shadow Mount

This is the most popular method of display. A Gatorfoam block with aluminum hangers is attached to the back of the print allowing it to be hung on the wall with a nail or screw. Once hung it appears that the image is floating ½" from the wall.

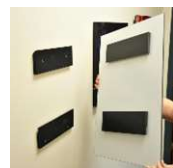

Aluminum Frame back

An aluminum frame is attached to the back of the metal. This frame can be hung using wire or a Z-Bar hanger. Once hung it appears that the image is floating ¾" from the wall.

Cleats

PVC or MDF cleats are applied to the back. This floats the graphic ½" off the wall and keeps it stable so that it will not tilt.

Standoffs

The panel can be mounted to a wall using aluminum standoff posts. We offer a large variety of sizes and finishes.

CDP Description

Commercial Display Panel (CDP) prints are an ideal solution for high quality durable prints to be used in commercial environments. They consist of:

- C-Print - a high-quality print, printed with a 10-color extended gamut solvent inkjet printer.

- Mounting on 3-mm E-Panel. (E-Panel is a rigid aluminum composite panel.)

- Laminated with a scratch resistant matte laminate that eliminates glare and protects the surface from marks and UV light.

- Corners have a 1/8" radius so that there are no sharp corners.
