There are many places offering slide scans. Some good and some not so good. In keeping true to the old adage "You get what you pay for," Robin has chosen to take the high road and focus on customers that expect the highest quality. We do not use automated equipment. All our scans are done by a highly qualified technician, one at a time, with quality in mind.

Personal Slide Scans

We scan at 1200 ppi (pixels per inch) and save files as a J-peg file. These are great for preserving family memories to be viewed on a monitor or to make prints up to 6x9 inches. Please note that these are not individually cropped, so if your slide size varies, as is often the case with plastic mounts, some of the image may be cropped. If you have plastic mounts and you are very critical about your crops, we recommend you use our Professional Slide Scans.

Professional Slide Scans

Slide scans for prints are done to higher standard and are suitable to be used for making prints.

- All scans are individually cropped so that there are no edges showing or subject matter cropped out.
- General color corrections are made – further corrections may need to be made prior to printing.
- All slides are individually dusted and checked for spots. We do not remove spots caused by dirt that is stuck to the slide. Spots on slides resulting from dirt stuck on them can be cleaned for an additional charge. Please note that you would like this done when placing your order.
- We offer three different resolutions depending on file size needed. (See chart below.)
- Images can be saved as J-peg or Tiff.

Maximum Print Sizes

From 35mm Film

Scan Resolution	Max Print Size @ 150 PPI	Max Print Size @ 300 PPI
1200 PPI	6x9	NA
2400PPI	12x18	6x9
3200PPI	20x30	10x15
4800 PPI	30x45	16x24

- The maximum print size is also subject to the film used and the quality of the image.

There are many places offering slide scans. Some good and some not so good. In keeping true to the old adage "You get what you pay for," Robin has chosen to take the high road and focus on customers that expect the highest quality. We do not use automated equipment. All our scans are done by a highly qualified technician, one at a time, with quality in mind.

Personal Slide Scans

We scan at 1200 ppi (pixels per inch) and save files as a J-peg file. These are great for preserving family memories to be viewed on a monitor or to make prints up to 6x9 inches. Please note that these are not individually cropped, so if your slide size varies, as is often the case with plastic mounts, some of the image may be cropped. If you have plastic mounts and you are very critical about your crops, we recommend you use our Professional Slide Scans.

Professional Slide Scans

Slide scans for prints are done to higher standard and are suitable to be used for making prints.

- All scans are individually cropped so that there are no edges showing or subject matter cropped out.
- General color corrections are made – further corrections may need to be made prior to printing.
- All slides are individually dusted and checked for spots. We do not remove spots caused by dirt that is stuck to the slide. Spots on slides resulting from dirt stuck on them can be cleaned for an additional charge. Please note that you would like this done when placing your order.
- We offer three different resolutions depending on file size needed. (See chart below.)
- Images can be saved as J-peg or Tiff.

Maximum Print Sizes

From 35mm Film

Scan Resolution	Max Print Size @ 150 PPI	Max Print Size @ 300 PPI
1200 PPI	6x9	NA
2400PPI	12x18	6x9
3200PPI	20x30	10x15
4800 PPI	30x45	16x24

- The maximum print size is also subject to the film used and the quality of the image.
